

Steps to Rodent Control with the Sherminator Team

01

INSPECTION AND INITIAL SERVICE

The technician will do an initial service and place bait boxes or rodent traps around the home or in the attic. They may also need to probe the rodent holes in your yard with bait or poison.

02

SCHEDULE TWO WEEK FOLLOW-UP

The office will give you a call to set up a free two week follow up to have a technician check the boxes or traps.
(*Note: Follow ups may take place sooner and may have a charge depending on the rodent initial plan)

03

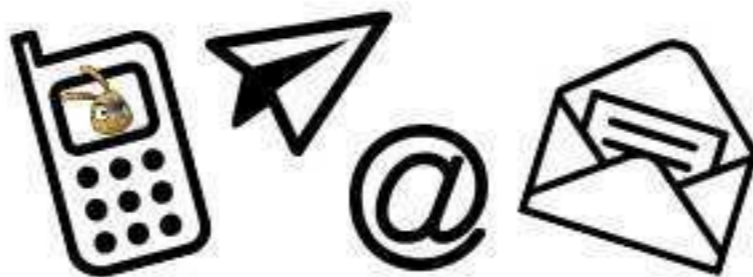

DURING YOUR FOLLOW-UP VISIT

During the two week follow up visit the technician will determine if rodent control can be reduced to monthly appointments or if another two-week follow-up is needed. This is determined by the rodent activity they see around the home and by how many bait boxes have been emptied at the follow-up.

04

CONTINUING SERVICES

Rodent control is usually a service that needs to continue for at least a few months to be successful so additional follow-ups are usually needed.

SHERMINATOR TERMITE AND PEST CONTROL

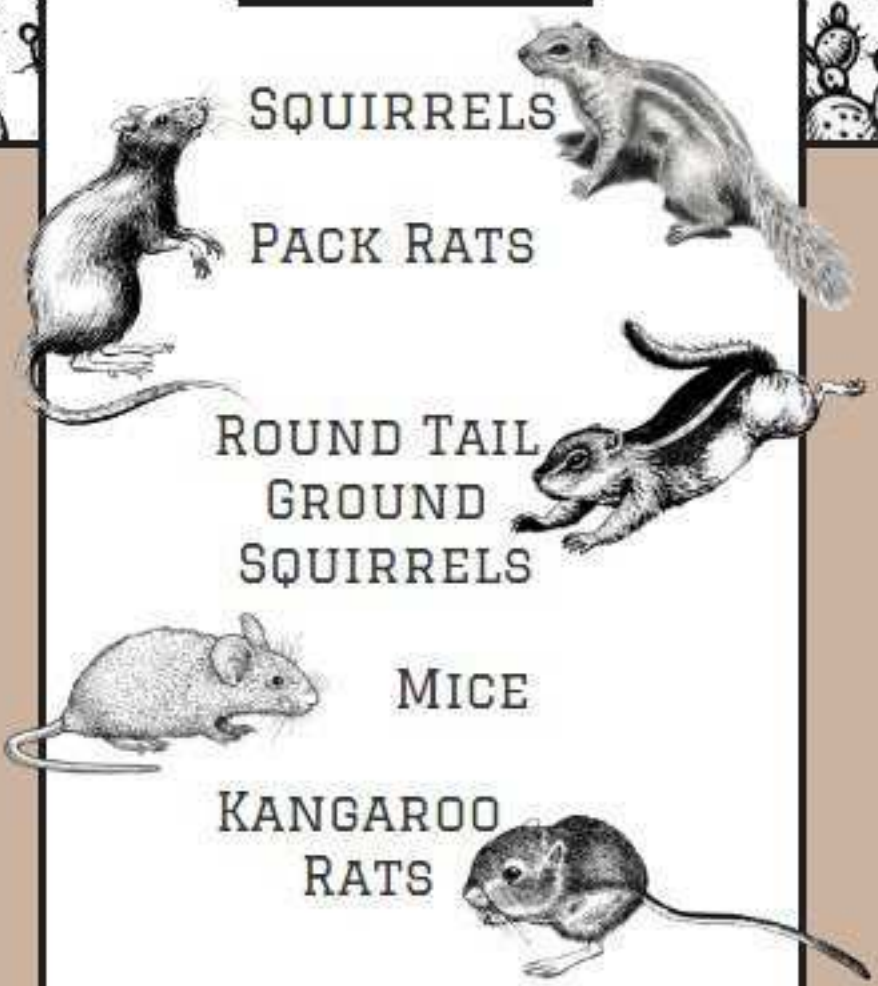

Southern Arizona
Rodent Control

Types of desert rodents in Tucson:

SQUIRRELS

PACK RATS

ROUND TAIL
GROUND
SQUIRRELS

MICE

KANGAROO
RATS

RODENT RED FLAGS:

1. ▶ Holes in the yard because they can live underground.
2. ▶ Nests, urine stains and droppings on the outdoor furniture, along walls and in corners, the porch, the backyard grill, the attic, inside the walls, in the garden or inside a vehicle.

WHY IS IT IMPORTANT TO KEEP THE RODENT POPULATION UNDER CONTROL ON YOUR PROPERTY:

Rodents leave droppings and urine stains around the home and carry many diseases including the black plague, which is unsanitary. They can move into the walls by squeezing themselves through cracks or chewing through material. They can destroy the electrical wiring in the home or vehicle.

✓ Fact: A rat can fit through a hole the size of your thumb, and a mouse can fit through a hole the size of your pinky.

A RODENT'S HABITAT (YOUR FRONT AND BACK YARD):

With proper and consistent rodent control, you can live in harmony in the desert.

HOW RODENT CONTROL SERVICES WORK:

Rodents can be a year-round pest. When the technician comes out for the first inspection, they will determine if the property has an infestation. They can explain what type of rodents are causing the issue. If your home is surrounded by desert, servicing the home monthly is crucial.

RODENT CONTROL PRICING:

- The initial service price is approximately \$165-\$200 depending on the work that is needed, and the number of bait boxes placed. This includes a free two-week follow up.
- Additional recurring rodent control prices per service are \$35 for the first box and \$5 per box filled after. *Note: Discounts are offered with combined rodent and pest services bundles.
- Rodent control can be cancelled by the technician or homeowner due to non-activity. In this case, the technician will collect all rodent boxes from the property, discontinuing rodent services. Any future rodent services will need to be re-quoted and priced.
